Dashboard

Link 3-Card system

Diagnostics

This tab is the central hub for any user trying to understand a complex problem. It's designed to move a user from a vague, ambiguous challenge to a clear, evidence-based diagnosis.

- **AI Event Analysis:** This is the primary tool for unstructured problems.
 - **Input Section:** A simple, open text box where the user can describe a situation in conversational language.
 - **Analysis Output:** After processing, this section displays the AI's findings, including:
 - **Key Themes Identified:** A summary of the core issues detected in the text.
 - **Root Cause Hypotheses (Body of the card)::** Potential underlying drivers for the observed issues.
 - **Content:** For each theme, provide a concise, one-to-two-sentence explanation. Use bolding to highlight key concepts. For example, for the **Burnout** theme, the hypothesis might be: "The intense focus on the deadline may have eroded **psychological safety**, preventing team members from voicing concerns about workload."
 - **Location:** Directly below the "Key Themes" tags. You could link them, so clicking a theme tag smoothly scrolls to its corresponding hypothesis.
 - **UX Principle: Clarity and Connection.** This section directly connects the high-level themes to deeper, more actionable insights, explaining the *why* behind the *what*.
 - **Recommended Drivers to Investigate:** A list of specific **CONCEPT**, **BEHAVIOR**, or **KPI** cards from the Playbook that are relevant to the diagnosis.
- **Behavioral Science Diagnostic**

This is a new tool within the **Diagnostics** tab. It should be designed as a clean, two-step process: an input wizard for the user, and a report of the results.

- **Part A: Bias Identifier (The Input)**
 - **Content:** A guided questionnaire. Group questions into logical categories (e.g., "Meeting Dynamics," "Decision Making," "Feedback Culture"). Use

simple, non-jargon questions like, "Are team members often hesitant to disagree with a manager's first suggestion?"

- **Location:** A full-page, multi-step "wizard" interface is best.
 - **Step 1:** "Select Observed Behaviors" from the categorized checklists.
 - **Step 2:** A final "Analyze" button to submit.
 - **UX Principle: Chunking.** The wizard breaks the complex task of diagnosis into small, manageable steps, reducing cognitive load and making the process feel less overwhelming.
- **Part B: Cognitive Bias Report (The Output)**
 - **Content:** The report should consist of a series of "Bias Cards," one for each cognitive bias the app has identified based on the user's input.
 - **Location:** The results should replace the wizard view. The top of the page should have a clear summary, e.g., "We've identified 3 potential cognitive biases impacting your team." Below this, display the Bias Cards in a vertical list.
 - **UX Principle: Information Architecture.** The card layout makes a complex topic digestible. Each card defines the bias, explains how it's affecting the user's specific situation, and provides a clear next step.

Here's what a single **Bias Card** in the report should contain:

- **Bias Name:** e.g., **Authority Bias**.
- **Simple Definition:** A one-sentence explanation.
- **"How It Might Be Showing Up":** A personalized section that explicitly links the bias back to the behaviors the user selected in the wizard.
- **Call to Action:** A prominent button: "Explore Nudges to Counteract This Bias."

Playbook

This tab is the knowledge center of the application. It replaces the "Metrics Library" with a richer, more strategic resource that contains all the interconnected "Driver Cards."

- **Library Explorer:** The main view of the page
 - **Search and Filter Bar (based on Framework, Driver Type, Outcome, Behaviour):** A prominent bar at the top that allows users to search by keyword or filter the entire library by:
 - **Driver Type:** (CONCEPT, BEHAVIOR, KPI, OUTCOME)
 - **Associated Framework:** (e.g., Goleman's EQ, Strengths-Based)
 - **L&D Outcome:** (e.g., Engagement, Productivity)
 - **Driver Card Grid:** A visually appealing grid displaying all the "Driver Cards," each showing its title and primary type.
- **Driver Card Detail View:** When a user clicks on a card, they see the full, detailed view, for example:

Driver Card: Growth Mindset

- 1. Type Identifier (What is this?): CONCEPT
- 2. Associated Frameworks (Where does this fit?):
 - [The Five Practices of Exemplary Leadership]
 - *This concept is foundational to the practice of "Challenge the Process."*
- 3. Driver Chain (How does this work?):
 - **Drives Behavior:** 행동 → "Embracing challenges," "Seeking constructive feedback."
 - **Measured by KPI:**  → "Skill Application Rate," "Voluntary Learning Hours."
 - **Leads to Outcome:**  → "Increased Resilience," "Faster Skill Development."
- 4. Classification Details (How do I manage this?):
 - **L&D OUTCOME:** Development & Resilience
 - **METRIC TYPE:** Foundational
 - **DATA COLLECTION:** Survey/Assessment
 - **FREQUENCY:** Annually
 - This section displays all the components of the card: the **Type Identifier**, **Core Description** with neuropsychology links, **Associated Frameworks**, the interactive **Driver Chain**, and the logistical **Classification Details**.
 - It also includes the **"Add to Plan"** quick action.
- **Intervention Engine / Nudge Library:** A dedicated subsection within the Playbook.
 - This section contains a library of specific, low-cost **"nudges"** and interventions. Each nudge is linked to the cognitive bias it is designed to counteract, allowing users to browse targeted solutions. **## 3. Intervention Engine / Nudge Library**

This library of solutions lives in the **Playbook** tab. Its purpose is to be an explorable, actionable resource.

Content and Location

The layout should be a searchable and filterable gallery.

1. **Filters (Left Sidebar or Top Bar):**
 - **Content:** A search bar for keywords and filter options to sort by the **Cognitive Bias** a nudge addresses (e.g., **Groupthink**, **Present Bias**) or by **Category** (e.g., **Meeting Nudges**, **Feedback Nudges**).
 - **Location:** A persistent sidebar on the left is ideal for discoverability.
 - **UX Principle: Findability.** Good filters make it easy for users to find the exact solution they need, even if they aren't coming directly from the diagnostic tool.
2. **Nudge Card Grid (Main Content Area):**

- **Content:** Each "Nudge Card" in the grid should display a title, a short description, and the bias it counteracts.
- **Location:** The main area of the page, displaying the results of any active filters.
- **UX Principle: Consistency.** The card design should be visually consistent with the "Driver Cards" to create a cohesive feel across the entire Playbook.

A click on a Nudge Card would open a detailed view with "How-to" steps, an explanation of "Why it works," and an **"Add to Plan"** button.

Plan Builder

This tab is the active workspace where the user constructs their final, curated development plan. It's designed as a clean, step-by-step process.

- **Step 1 Plan Setup:** The initial state of the page.
 - This section prompts the user to choose their starting point, which they would have selected from the Dashboard: **"Load a Framework"** or **"Load an Outcome."** This choice determines the initial filtering of the drivers.
- **sTEP 2 Driver Selection:** The main workspace.
 - **Competency Filters:** If a framework was chosen, this section displays the interactive competency filters (e.g., "Self-Awareness," "Relationship Management").
 - **Available Drivers Grid:** This displays the grid of "Driver Cards" relevant to the user's chosen framework, outcome, or competency filter. The user can add any driver to their plan from here.
- **Step 3 Current Selections Sidebar:** A persistent sidebar that is always visible on this page.
 - **Plan Summary:** This section provides a real-time, high-level summary of the plan being built (e.g., "3 KPIs, 2 Behaviors selected").
 - **Driver List:** A list of all the specific drivers that have been added to the plan.
- **Step 4 Generate Report:** The final call to action. This button becomes active once at least one driver has been selected, serving as the gateway to the final output. Once the user clicks "Generate," the app's backend performs the final synthesis.
- The final step is the presentation of the completed report.
- **Format:** The report is generated and can be presented in two ways:
 - A **web-based view** for easy online sharing and viewing.
 - A **"Download as PDF"** option for saving, printing, and attaching to emails.
- **Content of the Report:** The output is a multi-page, professional document containing:
 - The **Executive Summary** with the report title and date range.
 - The chosen **Visual Synthesis** (Radar or Tree) providing the at-a-glance overview.
 - The **Detailed Analysis** section, which breaks down each selected "Driver Card" with its full context (behaviors, metrics, etc.).

- An **Action Plan Template** with next steps, providing a clear call to action for the HR manager or client.
- **Action:** The app takes the final, curated list of "Driver Cards" from the user's plan. The **AI Synthesis Engine** then processes this list, aggregates the data, and maps all the information to the pre-designed report template, including the chosen visual.

Alignment of Products, Workflows, and Tabs

The Product (Need Addressed)	Primary Workflow Initiated	Key App Tabs Involved in Delivery
Leadership Capability Audit	Diagnose a Challenge	Dashboard (to start), Diagnostics (AI Event Analysis & Behavioral Science Diagnostic)
Targeted Development Roadmap	Build a Development Plan	Dashboard (to start), Plan Builder
L&D Impact Measurement	Build a Development Plan & Diagnose a Challenge (used iteratively)	Plan Builder (to set the baseline), Diagnostics (to re-assess)
Strategic Talent Advisory	Explore the Playbook & Diagnose a Challenge	Playbook (for learning & discovery), Diagnostics (to apply insights)

Detailed Workflow Outputs

Here is what the user gets at the end of each of the three main workflows initiated from the home screen, with notes on where they overlap.

1. Output of the "Diagnose a Challenge" Workflow

This workflow is for the user with an ambiguous problem. Its output is designed to provide **clarity and a structured diagnosis**.

- **AI Event Analysis Output:** A report card appears directly on the **Diagnostics** page. It includes:
 - **Key Themes:** A scannable list of tags summarizing the core issues (e.g., **Burnout**, **Flight Risk**).
 - **Root Cause Hypotheses:** Concise explanations of the potential underlying drivers.
 - **Recommended Drivers:** A list of specific "Driver Cards" from the **Playbook** to investigate further. Each recommendation has an **"Add to Plan"** button.
- **Behavioral Science Diagnostic Output:** A **Cognitive Bias Report** is generated on the **Diagnostics** page. It includes:
 - **Identified Biases:** A list of the specific cognitive biases likely at play (e.g., **Authority Bias**).
 - **Personalized Explanation:** A description of how each bias might be showing up based on the user's input.
 - **Link to Interventions:** A clear call to action that takes the user to a pre-filtered view of the **Nudge Library** within the **Playbook**.
- **Overlap:** This workflow begins on the **Dashboard** but primarily lives in the **Diagnostics** tab. Its output directly integrates with the other workflows when the user clicks "Add to Plan" or "Explore Nudges," sending them to the **Plan Builder** or **Playbook**.

2. Output of the "Build a Development Plan" Workflow

This workflow is for the user who is ready to create a specific plan. Its output is the **curated plan itself and the final, presentable report**.

- **The Curated Plan:** This is a "living" output that is built in real-time within the **Plan Builder** tab. It consists of:
 - The **"Current Selections" Sidebar:** A list of all the **Driver Cards** the user has chosen, providing a constant summary of their plan.
- **The Final Report:** After clicking "Generate Report," the user receives the final, tangible output. This comprehensive document includes:
 - **Executive Summary:** A high-level overview of the plan's focus.
 - **The Visual Synthesis:** The **Unified Competency Radar** or **Competency Tree**, providing an at-a-glance view of strengths and gaps.
 - **Detailed Analysis:** A breakdown of each selected **Driver Card**, including its behaviors, metrics, and associated frameworks.
 - **Action Plan Template:** A section with suggested next steps and a template for creating a formal L&D action plan.
- **Overlap:** This workflow starts on the **Dashboard** and is executed in the **Plan Builder**. It can be informed by the **Diagnostics** workflow and enriched by the **Playbook**.

3. Output of the "Explore the Playbook" Workflow

This workflow is for the user in a learning or discovery mindset. Its output is not a formal report but rather **knowledge and contributions to an active plan**.

- **Knowledge & Understanding:** The primary output is the user's enhanced understanding of L&D concepts, behaviors, metrics, and interventions. They get this by browsing and filtering the library of **"Driver Cards"** and the **"Nudge Library."**
- **Contributions to the Development Plan:** This workflow is not a dead end. When a user finds a relevant **Driver Card** or **Nudge** in the **Playbook**, they can click **"Add to Plan."**
 - The immediate output is that the selected item instantly appears in the **"Current Selections"** sidebar within the **Plan Builder** tab.
- **Overlap:** This workflow starts on the **Dashboard** and takes place in the **Playbook**. It directly contributes to the "Build a Development Plan" workflow, demonstrating how the app's different sections work together as a single, cohesive system.
