

Here is a detailed breakdown of how the app's core products align with its workflows and tabs, followed by a detailed outline of the output for each of those workflows.

Alignment of Products, Workflows, and Tabs

The Product (Need Addressed)	Primary Workflow Initiated	Key App Tabs Involved in Delivery
Leadership Capability Audit	Diagnose a Challenge	Dashboard (to start), Diagnostics (AI Event Analysis & Behavioral Science Diagnostic)
Targeted Development Roadmap	Build a Development Plan	Dashboard (to start), Plan Builder
L&D Impact Measurement	Build a Development Plan & Diagnose a Challenge (used iteratively)	Plan Builder (to set the baseline), Diagnostics (to re-assess)
Strategic Talent Advisory	Explore the Playbook & Diagnose a Challenge	Playbook (for learning & discovery), Diagnostics (to apply insights)

New Tabs

Dashboard | Diagnostics | Playbook | Plan Builder replaces the current tabs: Dashboard | Plan & Measure | AI Event Analysis | Metrics Library

Detailed Workflow Outputs

Here is what the user gets at the end of each of the three main workflows initiated from the home screen, with notes on where they overlap.

1. Output of the "Diagnose a Challenge" Workflow

This workflow is for the user with an ambiguous problem. Its output is designed to provide **clarity and a structured diagnosis**.

- **AI Event Analysis:** This is the primary tool for unstructured problems.
 - **Input Section:** A simple, open text box where the user can describe a situation in conversational language.
 - Analysis output: After processing, this section displays the AI's findings, including:
 - **Key Themes Identified (Top of the card):**
- **Content:** Display the themes the AI has detected as interactive "pills" or tags (e.g., **Burnout**, **Flight Risk**, **Lack of Recognition**).
- **Location:** Arrange these tags horizontally at the top of the results card.
- **UX Principle: Scannability.** Tags are visually distinct and allow the user to grasp the main issues in seconds.
 - **Root Cause Hypotheses (Body of the card):**
- **Content:** For each theme, provide a concise, one-to-two-sentence explanation. Use bolding to highlight key concepts. For example, for the **Burnout** theme, the hypothesis might be: "The intense focus on the deadline may have eroded **psychological safety**, preventing team members from voicing concerns about workload."
- **Location:** Directly below the "Key Themes" tags. You could link them, so clicking a theme tag smoothly scrolls to its corresponding hypothesis.
- **UX Principle: Clarity and Connection.** This section directly connects the high-level themes to deeper, more actionable insights, explaining the *why* behind the *what*.
 - **Recommended Drivers to Investigate:** A list of specific **CONCEPT**, **BEHAVIOR**, **OUTCOME** or **KPI** cards from the Playbook that are relevant to the diagnosis.
- **Behavioral Science Diagnostic Output:** A Cognitive Bias Report is generated on the **Diagnostics** page. It includes:

- **Identified Biases:** A list of the specific cognitive biases likely at play (e.g., Authority Bias).
 - **Personalized Explanation:** A description of how each bias might be showing up based on the user's input.
 - **Link to Interventions:** A clear call to action that takes the user to a pre-filtered view of the **Nudge Library** within the **Playbook**.
- **Overlap:** This workflow begins on the **Dashboard** but primarily lives in the **Diagnostics** tab. Its output directly integrates with the other workflows when the user clicks "Add to Plan" or "Explore Nudges," sending them to the **Plan Builder** or **Playbook**.

2. Output of the "Build a Development Plan" Workflow

This workflow is for the user who is ready to create a specific plan. Its output is the curated plan itself and the final, presentable report.

- **The Curated Plan:** This is a "living" output that is built in real-time within the **Plan Builder** tab. It consists of:
 - The **"Current Selections" Sidebar:** A list of all the **Driver Cards** the user has chosen, providing a constant summary of their plan.
- **The Final Report:** After clicking "Generate Report," the user receives the final, tangible output. This comprehensive document includes:
 - **Executive Summary:** A high-level overview of the plan's focus.
 - **The Visual Synthesis:** The **Unified Competency Radar** or **Competency Tree**, providing an at-a-glance view of strengths and gaps.
 - **Detailed Analysis:** A breakdown of each selected **Driver Card**, including its behaviors, metrics, and associated frameworks.
 - **Action Plan Template:** A section with suggested next steps and a template for creating a formal L&D action plan.
- **Overlap:** This workflow starts on the **Dashboard** and is executed in the **Plan Builder**. It can be informed by the **Diagnostics** workflow and enriched by the **Playbook**.

3. Output of the "Explore the Playbook" Workflow

This workflow is for the user in a learning or discovery mindset. Its output is not a formal report but rather **knowledge and contributions to an active plan**.

- **Knowledge & Understanding:** The primary output is the user's enhanced understanding of L&D concepts, behaviors, metrics, and interventions. They get this by browsing and filtering the library of **"Driver Cards"** and the **"Nudge Library."**
- **Contributions to the Development Plan:** This workflow is not a dead end. When a user finds a relevant **Driver Card** or **Nudge** in the **Playbook**, they can click **"Add to Plan."**
 - The immediate output is that the selected item instantly appears in the **"Current Selections"** sidebar within the **Plan Builder** tab.

- **Overlap:** This workflow starts on the [Dashboard](#) and takes place in the [Playbook](#). It directly contributes to the "Build a Development Plan" workflow, demonstrating how the app's different sections work together as a single, cohesive system.
